NEWS AND GOSSIP.

The Pacific annual conference was to

commence in San Francisco on the 28th of September, Bishop Pierce to preside. The Irish citizens of Sacramento, Cali-

fornia, propose presenting a sword to Marshal Neil, of the French army. Hon. Samuel A. Smith, of Tennessee, has accepted the appointment of Commissioner of the General Land-office, recently tendered

him by the President. The papers of Prussia complain that great numbers of young men leave that country clandestinely for the United States to avoid military service.

Advices from St. Martin's of September 15 state that very heavy rains had taken place there, destroying 300,000 bushels of sait at the Great Bend.

25 On the 15th of August the corner-stone of the First Wesleyan Methodist Church was laid at Victoria, in British Columbia, by Governor Douglass.

A statement was made at a late Convention of the Congregational clargymen of New Hampshire, that "not one pastor in the whole Convention used tobacco."

Mr. F. Robbins, lately connected with the Jefferson Savings Institution, has been appointed teller in the Northern Bank of

The Grand Trunk Railroad of Canada is discarding all wooden bridges and substi-tuting iron ones of the most durable char-

The Cambridge City Bulletin says that the Whitewater Canal is now in excellent boating condition, and the boats running are receiving a good supply of freight.

Mr. George Vandenhoff has a volume in press, entitled "Leaves from an Actor's Note-Book, with Reminiscences and Chit-Chat of the Green-Room and the Stage in England

whose varied writings are well-known in this country, has written a work, which is to be published immediately, entitled The Great Tribulation Coming on the Earth. The New Haven Register relates that an ctor at one of the theaters was called out four

times in one evening, not long ago-twice by a sheriff, once by a tailor, and once by an irresistible desire to imbibe. The inhabitants of Paris have recently presented the Empress Eugenie two superb

ounces. They contain flowers of gold, each emitting an odor similar to the natural one of the flower which its form represents. "There's two ways of doing it," said Pat to himself, as he stood musing and wait-ing for a job on the State-street corner. "If

I save me \$4,000, I must lay up \$200 a year for twenty years, or I can put away \$20 a year for two hundred years. Now which way will I do?" Estimating the present population of Cincinnati at two hundred and thirty thousand; the annual increase at ten per cent., in ten years the population will be five hundred and ninety-six thousand, five hundred and fifty-

nine. During the last ten years, the ratio of increase was eleven per cent. The Austrian expedition around the globe, at the head of which was Dr. Scherzer, is at length completed. The Novara, with all the scientific collections on board, has safely arrived at Trieste, and the Austrian Govern-ment will soon publish the results of this im-portant circumnavigation. Several savans took part in the expedition.

The trade carried on between the Terriory of New Mexico, and the Northern State of the Mexican Republic, and the United States, through Kansas, is now very large, amounting to nearly ten millions annually and is yearly increasing. Formerly that trade was exclusively confined to Indepen-

dence, Missouri. Mr. Calvin Adams, of Pittsburg, Penn., has recently discovered that an important electrical change takes place when molten iron solidifies in cooling. By insulating the molds, and the man pouring in the liquid metal, the castings from common iron came out as white as silver and as hard as steel. This is another evidence of the universality of this subtle force, and though it is not as yet applied to any practical purpose, such phenomena can not fail eventually to pro-duce useful effects,

A. Strange Romance—A Father Finds
His Daughter after a Search of
Twenty-live Years.

Years ago, a young man, Mr. T., resident of this town, went to Albany to see some friends, and while there made the acquaintance of a young lady, a dress-maker in the family he was visiting. During his stay in that city he won the affections of the dress-maker, and under the promise of marriage accomplished her ruin. Mr. T. left for his home after assuring the young lady that he would return and fulfill his engagement; but also his promise. fulful his engagement; but, alas, his promise was not fulfilled—they never met again. After months of anxiety and self-upbraidings, Mr. T. returned to Albany to see the object of his affections and marry her; he loved her, though anections and marry her; he loved her, though its had so cruelly deceived her. The dressmaker had left the city, and no traces of her could be found. He ascertained, however, that she had given birth to a daughter, and, after waiting months for his return, had left the city of her shame. After a fruitless effert to find her and his child, he returned to his home. Many long years have intervened; the young man has become a wealthy farmer and young man has become a wealthy farmer and is surrounded by a happy and interesting family. He has been blessed with everything to make him happy, but the recollection of that wronged one has embittered his existence and made life most miserable, and year after year he has been untiring in his efforts to dis-cover her or the offspring of their unhallowed

The mother, after leaving Albany, married, in one of the river counties, a mechanic. The daughter remained with her mother until she had reached the age of fifteen, when, in con-sequence of the ill-treatment of her stepsequence of the ill-treatment of her step-father, she left her home and obtained a situ-ation as a servant in the family of Mr. B., of Troy—that gentleman having formerly been a resident of this village. Soon after, the young girl's mother died, and having no relatives to whom she could look for sympathy or aid, she was persuaded to come to this village and reside in the family of Mr. B.'s father. She accordingly arrived here about nine years since, and five years ago was married to a young man, a mason by trade. Last winter the lady's husband was employed to do some work for Mr. T. After the work was com-pleted, Mr. T. visited the mason's house several times for the purpose of carrying produce in payment of his labor. Mr. T. was impressed with the appearance of the young man's wife, and on inquiry assertained where she was from, what her mother's name was before she was married, &c., (the daughter had been christened the name of her step-father,) and, after a most thorough investigation, he became convinced that she was his long lost daughter! This wife had never known of his criminal love, and he dared not reveal it to her. For several months he wrapt the secret in his own breast, till at last paternal affection would be a love at least paternal affection. would no longer allow him to remain silent, and he made himself known to his daughter, told his wife all, who wirely forgave him, and consented to receive her as one of the family. The daughter is happy in the possession of a father's love, and will be joint heir of his property. Truly,

"Truth is stranger than fiction," Was it chance that directed his daughter's footsteps into the house of Mr. B., afterward brought her to this place, and finally restored her to a father's love, or was it that

"Divinity which shapes our ends, rough how them as we may ?" -Homer (Cortland County, N. Y.,) Republican.

We have already announced the death of the distinguished engineer, Isambard Kingdom Brunel. His father, Mark Isambard Brunel, came from the vicinity of Rouen, and his architecural achievements exist both in his native country and the United States. In 1793 he fied for political reasons from France to New York, where he undertook the exploration and survey of some lands for a French land company, and in 1794 commenced the survey of the Cham-plain Canal. He sent in a design for the houses of Congress, and was much employed as an engineer and architect in New York, both by the State and by private individuals. After a stay of a few years he returned to Europe, and visited England. In London, the ismous Thames Tunnel remains an enduring monument of his engineering skill. The son appears to have inherited the genius of his parent. Born at Portsmouth, England, and educated at Caen, in Normandy, he early embraced his father's profession, and when but little over twenty years of age, was resident engineer of the Thames Tunnel. Here he had several narrow escapes from drowning, from the breaking in of the water. After the tunnel was finished, Brunel planned the Great Western Railway of Engand, and superintended its construction. He also built the Great Western steamer, which at one time created such a sensation, though in every respect it was as far sur-passed by subsequently built steamers, as they are by the builder's last work—the Great Eastern. Later, Mr. Brunel conducted the works of the Tuscan portion of the Sar-dinian railways, and other foreign railways, and during the Crimean war he had the entire charge of the establishment and organ-izing the Renkioi hospitals on the Dar-danelles. He was, at the time of his death, Vice-President of the Institution of Engineers and of the Society of Art, fellow and mem-ber of the Council of the Royal Society, and member of many other learned societies. He also received the Cross of the Legion of Honor from Louis Philippe.

THE CALORIC ENGINE IN PRINTING .- The Northampton (Mass.) Gasette thus records the triumphs of its new caloric engine:

It goes "like a clock." Puffing and blowing, it tugs away at its work like a boy at his stent. Hundreds of people have been to see it. "What makes it go?" asks one. "Where is the water?" asks another. "What the deuce won't they get up next?" And on it goes! "What's that blowing off?" That is the escape of hot air. When more heat is generated than it needed to drive the press. enerated than is needed to drive the pre it is passed off through the escape pipe water is used. A fire is built in the little furnace and the wheel set in motion, and away it goes. It needs no attention any further than to keep the fire burning. Any boy can manage it. And besides driving the press, it gives all the heat necessary to warm the room in the coldest weather. It can consume but little fuel, and therefore can not cost much to run it. It is the chenpest power in the world. When first set up, the draft was not good, and it failed to show its power, but that difficulty has been overcome, and now it "goes like a top." Three cheers for the caloric printer!

I. O. O. F .- The Grand Lodge of the United States, at its recent annual session in Baltimore, consisted of one hundred and eight officers and members. It is probably the best legislative body in the world, as all of its members must necessarily have presided over subordinate lodges, and a large proportion having been the presiding officers of State Grand Lodges. The material of the late Grand Ledge was as follows: Mechanics and manufacturers, 20; lawyers, 17; merchants, 15; officers of private corporations, 14; public officials, 9; physicians, druggists and dentists, 7; private bankers and clerks, 7; farmers and planters, 4; editors, 3; clergymen, 1; no occu-pation, 1. Among the above were Judges Postmasters, Railroad and Bank Presidents Generals, and so on, and what is odd, not a single public or private defaulter.

Editing a Newspaper.

In the "Drawer" of that excellent periodical, the Southern Tencher, says the Columbus (Car) Sun, we find the following, in which is concentrated a volume of truth :

Editing a newspaper is a good deal like making a fire. Everybody supposes that he can do it a little better than anybody else. We have heard people doubt their fitness for various employments; but in all our experience, we have never met with that individual who did not think he could doubte the circulation of any paper in two months.

any paper in two months.

We might add that there are as many and various opinions concerning the duties and qualifications of the editor, as there are men qualifications of the editor, as there are men themselves, and perhaps no one error is more prevalent than that with regard to original and selected matter. Some imagine that the columns of a newspaper should be filled with article's of the editor's own originating; while few, a very few, concur in opinion that that paper is best conducted which constitutes a faithful reflection or panorama of the world as it is each day. In either case, the columns of a paper may reflect the views of the editor.

it is each day. In either case, the columns of a paper may reflect the views of the editor, upon "matters and things" as they occur.

The experience of that Nestor of the Press, the National Intelligencer, as well as others that have had a successful career, is decidedly in favor of the latter of the above methods. The secret which all acknowledge, but few practice, is not knowing what to write, but in what not to write. While many papers have proved faitures because of what has filled their columns, others have succeeded on account of umns, others have succeeded on account of what has been excluded. The secret of success then lies more in judicious selections; in fer-ratting out news; in discovering what is rich and valuable in the thoughts of others than in and valuable in the thoughts of others than in distilled dallness of original articles, from the pen of mere political escayists who preside over the fortunes of a daily, or that less frequent hebdomadal, a weekly. Of course these views must be modified according to the purpose for which a paper mey be established, or the prin-ciples to which it may be devoted, in which case it is better even then to exhibit by a happy election the concurrent and corroborating opinions of others to fortify a position than to rely principally upon the power and force of a

Like any other profession, we confess, it is easier by far to theorize upon the duties of the editor, than to carry the conclusions of theory into effect.

Steam from Antwerp to Baltimore and Charleston.

A Brussels correspondent of the New York

Herald, says: I think I may now report, with certainty, that the basis for the line of steamers between Antwerp and the South is fully decided upon this side. The steamers will depart once a week from Antwerp, with alternate arrivals at Baltimore (or the Chesepeake) and Charleston, South Carolina. The line is mostly intended for carrying freight. Falmouth, in England. made a port of call going and coming. There are some negotiations now going on to that effect. The great railroad companies having a direct interest in this steam service are: the London and South-western, England; the Cologne and Antwerp, Belgium; the great Luembourg, Belgium; the Baltimore and Ohio, America, and the Charleston and Memphis, and Charleston and Tennessee Railroads, America. The Virginia railroad interest, con-centrating at Norfolk, would, of course, be-come (like Falmouth, in England,) a port of call. It is believed on this side that in less than two years this service will justify semiweekly departures from Autwerp direct for America, touching at Falmouth, England.

SNAKE FOR A BEDYELLOW .- About two weeks ago Mr. John Elder, of this town, had an under-suck for a bed, filled with straw, at "Kenmore," by a negro man. It was brought home and placed under a feather-bed which was slept on by a daughter of Mr. E's. The young lady complained on a number of occa-sions of having her slumbers disturbed by distinct thumps from underneath, but examina-tions revealed nothing. On Thursday morn-ing, while Miss E. was sitting down stairs, facing the steps which led up to her room, she was startled by a curious noise, and looking up discovered a meccasin snake descending, blow-ing and hissing in a style peculiar to the rep-tile. An examination of the premises was made at once, when a small hole was discovered in the under-sacking, and on ripping the bed open, the full length of a snake was found at the hole, which his snakeship had shed before he resolved on his strike for freedom.—Fredricksbury (Va.) Herald. RAVAGES OF THE BEARS IN WISCONSIN .- OUR

Wisconsin exchanges continues to be filled with startling accounts of the ravages of the The whole State appears to be swarming with these ferocious animals, and the inhabitants are becoming alarmed for their safety. The bears no longer confine their visits to farmer's pig-pens, but boldly approach their dwellings and apply for admitance at kitchen-doors and bed-room windows. bear-hunts are got up in various parts of the State, for the purpose of driving away the varmints and protecting the inhabitants. The Manitouwee Trbiane thinks the theory that they have been driven from the North, by scarcity of food, into the settlements, is a plausible one. "Long continued drought and extensive fires have prevented the usual supply of mast, and Bruin dees not object to a dish of corn, a nip of veal, a rasher of bacon, or even a fat baby, when acorns are scarce."

REMARKABLE RESCUE. On Friday morning, as the freight train on the Camden and Atlan-tic Railroad, bound east, was approaching Hammonton, N. J., an object was seen on the track ahead, which was soon ascertained to be a child. The brakes were instantly applied and the engine reversed, but the great mo-mentum of fourteen burthen cars it was soon evident would carry the train far beyond the ecross the track, when the fireman, Edward Mackey, a lad of eighteen years, ran out upon the cow-catcher and lifting the child from the very jaws of death soon placed it in safety, amid the choers of the spectators of his gallant conduct. The child belonged to a Mr. Robinson, a resident of Hammonton, and had rambled upon the railroad track without the knowledge of its parents.—Philadelphia Ledger.

ELECTRICITY IN CATS .- The extraordinary electrical character of the cat is well-known. On a cold, bright day, if a cat be stroked, the electrical sparks issue therefrom, accommanded by a slight crackling. It appears, too, that the animal may be so surcharged with electricity, that it will give a severe shock to the beholder. In order to obtain this result, the cat should be placed on the knees and one hand applied to the breast while the other is employed in tracking its fur. Crackling and applied to to the breast while the other is employed in stroking its fur. Crackling and sparkles soon make their appearance, and, in a short time, if the party continues to stroke the animal, he will receive a shary electrical shock that may be felt above the wrists. The cat seems to suffer as much as the experimenter, for on giv-ing forth the shock she apprings to the grant ing forth the shock, she springs to the ground in terror, and seldom will permit a repetition of the same process.

MARRIAGE NOTICES .- The Cleveland Perale MARRIAGE NOTICES.—The Cleveland Perala publishes the names of bridesmaids and groomsmen as well as the "happy couple." It says: "We see no impropriety in our so doing, and assuredly next to the fact that a friend has been married come the questions, "Who stood up with them? Who gave the bride away?"

LATEST BY TELEGRAPH REPORTED FOR THE PENNY PRESS.

Noon Dispatches.

Washington Correspondence. NEW YORK, October 8. The Times's Washington correspondent

says:

"Lord Lyon, the British plenipotentiary, had a protracted interview with Secretary Cass, to-day, in regard to the departure of the Nicaragua expedition; he announced the line of the protect the Nicaragua expedition: he announced the determination of his government to protect Nicaragua by force against invasion. The right and propriety of this course is recognized by the government of the United States, and, therefore, a telegraphic dispatch was at once expedited to the commander of the British squadron directing him to land such force as may be required for the expulsion of the fillibusters should they succeed in effecting a landing.

From Washington.

n effecting a landing.

Washington, October 6.

The President has recognized Henry A.
Pierce as Consul for the Kingdom of Rawaiin
Islands for Boston, New Bedford, Portamouth and Portland, to reside at Boston.

While it is authoratively stated that it may
be that the Minister of War did set out for
Pekin, and is there now, after having exchanged ratifications of the treaty, but no
official advices to that effect have been recovered at the State Department. WARRINGTON, October 6. seived at the State Department.

It may be mentioned that Capt. Tatnall, in a letter dated the 4th of July, says that by invitation of the Governor of the Province, Mr. Ward had designated the 8th of that nonth for a conference with him.

From New York.

NEW YORK, October 6. Only two of the three steamers advertised to sail for California yesterday left this port—the Baltie and Northern Light—Mr. D. H. Johnson, the contractor to carry the Calfornia mails by the Nicaragua route, having notified the Postmaster-General that owing to circumstances he could not fulfill his contract. The provisional contract for nine months to carry mails via Panama, was completed with Mr. Vanderbilt, and all the mails went by the Northern Light.

Failure of an Ohio Bank.

Sterberville, O., October 6.
The Citizens' Bank, of this city, of which
Daniel Moody, an old and well-known financier, is Cashier, has closed its doors. It is supposed that the bank, which is but two or three years old, has sunk its capital; but as it issues no notes, the less will not be large to the community. Some persons here believe its indebtedness will be fully met by the stockholders.

The Fillibusters.

NEW ORLHANS, October 5. The fillibusters did not leave Berwick's Bay, but went down the river in the tow-boat Punther without a sufficient supply of provi-sions, and were unable to await better accommodations. The men have since landed at South West Pass. Collector Hatch still refuses a clearance to the steamship Philadel-phia. Mr. Hatch's great precaution has doubtless frustrated the expedition.

The Boston Herald gives an account of the death of Henry Black, of Newport, Penn., who undertook to sever the head of a hen, and was attacked by a rooster, which spurred him on the hand into an artery. About two weeks after the accident he was attacked with intense pain, a sickening sensation of the heart, and his sufferings I scame insupportable. At this date a remarkable occurrence took place. He drew his entire frame together, as though to gain strength for an act, and his voice broke forth like the crowing of a rooster. This was repeated from time to time, and such was the similarity of voices, that the outside listeners asserted their belief that it was a rooster. After four days of indescribable suffering he died, and crowed no more.

N UN OVER .- Yesterday morning the down train on the D. & M. Road, when going at a round rate of spred this side of Troy, ran over a couple of horses. The animals were on a narrow strip of ground between the track and a fence, and as the locomotive approached them they ran into the corner where the fence joined to a cattle guard, and attempted to cross over the track. The locomptive struck them, knocking one of them up into the air about ten feet, and the wheels passing over the neck of the other, and wheels passing over the need of the dual, and nearly severing it from the body. No damage was done to the train, except that the horse which was "sent up" whirled around and fell between the first and second cars, tearing off the steps on one side of the rear car. Both horses were killed .- Dayton Empire.

HEAT OF DEPPERENT WOODS .- The following is set down as the relative heating values of different kinds of American wood: Shellbark hickory being taken as the highest standard, 100; pig-nut hickory, 95; white oak, 84; white ash, 77; dog wood, 76; serub oak, 73; white hazel, 72; apple tree, 70; red oak, 69; white beech, 65; black walnut, 66; black birch, 63; yellow oak, 60; hard maple, 59; white elm, 58; rod cedar, 50; wild cherry, 55; yellow pine, 44; chestnut, 52; yellow poplar, 52; butternut, 52; white birch, 40; white pine, 42.

A colony of Danes have made arrange-ments to settle in Butler County, Missouri, next spring. They have, through an agent, purchased large tracts of swamp lands in that county, and have sent out twenty active young men, who are now engaged in clear-ing and fencing the ground preparatory to a full crop next year, when about one hun-dred families will move in. A colony of quakers has, we learn, made purchases near Leavenworth, Kansas.

The Berlin Volkszeitung denies the statement made by many German and English newspapers of the library of Alexander Von Humboldt having been sold to Lord Bloomfield on account of the trustees of the Bromheid on account of the trustees of the British Museum. The paper adds that sev-eral gentlemen are still busy making a cata-logue of the library, which will not be fin-ished before the end of December, the books turning out to be much more numerous than vas at first believed.

cently fought in the new diggings on the Colorado, between E. Warren, of Indians, and G. W. Harrison, of Virginia. Both were candidates for Justice of the Peace, and Harrison was elected, from which arose the difficulty. They fought with Colt's navy revolvers, at fifteen paces. At the second fire Warren was killed, the ball penetrating his heart.

A gentleman traveling on horseback out West, came upon an Irishman who was fencing in a most barren and desolate piece of land. "What are you fencing in that land for, Pat?" said he, "a herd of cows would starve to death on that land." "And sure, your honor, wasn't I fencing it in to kape the

ABUSING HIS FAMILY .-- Hugh McElroy was arraigned in the Police Court, yesterday, charged with abusing his family, and was fined \$5 and costs of prosecution.
